About This Game

The year is 1967 and you are a TV repair person. Get to work.

In TV Trouble, you are presented with an endless conveyor belt of faulty TVs. Each TV is a micro-puzzle comprised of dials, button panels and antennae. Tune in and repair as many televisions as you can against the clock. Earn bonus points for speedy and efficient work.
Gamepad and Keyboard supported.

For a free Steam game, this is alright. I am able to play it using my Xbox One Controller. My only concern is that it is quilte slow on my computer. I have a 5 year old computer (HP 2000 laptop) so if you have an older computer, then wait until you upgrade. It's an easy way to kill time when it's actually running fast! :D. A unique and fun puzzle game that kind of needs a story or some sort of progression to be as satisfying as it should be. As it stands, you have a two minute test after which your performance is evaluated and you get a letter grade. I'd really like to see this developed into something more engaging, be it a Papers, Please style slow reveal, or something comical like the old John Cheever story about the radio.

I'll note that the game is wonky sometimes, with "good" solutions flickering between two video clips and the sound jittery. This seems to come and go. If your game doesn't look and sound like the gameplay trailer, try a reboot. Or do what I did and just wait several months.

Recommended even so. It's fun and there's nothing else on Steam quite like it..
